ably gained currency ever since. This usage was confirmed during the advent of modern science.
Within the various uses of the word today, "nature" may refer to the general realm
of some cases to the processes associated with inanimate objects—the way that particu
larly as the weather and geology of the Earth, and the matter and
to be "natu **environment**" or wilderness—wild and
seen substantially, and by human intervention, or which persist d
GREEN... erally are not considered part of nature, unless qualified as, for exam
This concept of natural things which can still be found today implies a distinction
between the artificial, wild, and the natural being understood as that which has been brought into being by a human conscious
an mind. Depending on a particular context, the term "natural" might also be distinguished from the unnatural, th
of the artificial. Earth (or, "the earth") is the only planet presently known to support life, and its natural features ar
fields of scientific research. Within **the solar system**, it is third nearest to **the sun**; it is the large
of the fifth largest overall. Its most prominent climatic features are its two large polar regions; two relatively nar
and a wide equatorial **tropical** to subtropical region. Precipitation varies widely with location, from se
as than a millimetre. 71 percent of the Earth's surface is covered by salt-water oceans. The remaind
lands, with most of the inhabited land in the Northern Hemisphere. Earth has evolved through geolo
and biological process
e left traces of the original conditions. The outer surface is divided into several gradually mig
geological relations. **The interior remains acc**
magnetic field. The atmospheric conditions have
which create an ecological balancer that stabilize
